

a computer, wherein the computer is in operative connection with each transaction function device;

software executable in the computer, wherein the software includes a browser, wherein the software is operative to enable the computer to access an HTML document which corresponds to the availability of the transaction function devices in the machine.

34
[Kindly substitute the following amended claim 2 for pending claim 2:]

2. (once amended) The apparatus according to claim 1 wherein the machine includes different types of transaction function devices, and wherein the computer operates the browser to access the document by generating an address, and wherein at least a portion of the address is indicative of at least one of the types of transaction function devices included in the machine.

[Kindly substitute the following amended claim 3 for pending claim 3:]

3. (once amended) The apparatus according to claim 1 wherein the machine includes a transaction function device including a depository.

(Kindly substitute the following amended claim 4 for pending claim 4:]

4. (once amended) The apparatus according to claim 1 and further comprising a server, wherein the server is operative to deliver at least one document to the browser, wherein the document is delivered responsive to the availability of a particular type of transaction function device in the machine.

By [Kindly substitute the following amended claim 5 for pending claim 5:]

5. (once amended) The apparatus according to claim 4 wherein the particular type of transaction function device in the machine includes a sheet dispenser, and wherein the machine does not include an available transaction function device including a depository for carrying out deposit transactions, and wherein the one document delivered by the server includes no reference to a deposit transaction.

[Kindly substitute the following amended claim 6 for pending claim 6:]

6. (once amended) The apparatus according to claim 4 wherein the available transaction function devices in the machine include a sheet dispenser for carrying out a dispense transaction and a depository for carrying out deposit transactions, and wherein the one document the server is operative to deliver to the browser includes a reference to both a dispense transaction and a deposit transaction.

Kindly add new claims 13-20 as follows:

13. (newly added) The apparatus according to claim 1 wherein the at least one available transaction function device in the machine includes a currency dispenser device, wherein the currency dispenser device is adapted to selectively dispense currency from the machine, wherein the computer is in operative connection with the currency dispenser device.

14. (newly added) The apparatus according to claim 1 wherein the machine includes a card reader transaction function device, a currency dispenser transaction function device, a depository transaction function device, and a receipt printer transaction function device.

15. (newly added) The apparatus according to claim 7 wherein a transaction function device includes a currency dispenser device in the machine, wherein the currency dispenser device is adapted to selectively dispense currency from the machine, wherein the computer is in operative connection with the currency dispenser device.

16. (newly added) The apparatus according to claim 7 wherein the machine includes a card reader type of transaction function device, a currency dispenser type of transaction function device, a depository type of transaction function device, and a receipt printer type of transaction function device.

17. (newly added) The method according to claim 10 wherein the first transaction function device includes a currency dispenser device, and the second transaction function device includes a depository device.

18. (newly added) The method according to claim 10 wherein the first and second transaction function devices are selected from among a card reader transaction function device, a currency dispenser transaction function device, a depository transaction function device, and a receipt printer transaction function device.

19. (newly added) A method comprising the steps of:

providing an automated transaction machine including

a computer with a browser, and

a plurality of transaction function devices,

providing a plurality of documents, wherein each of the documents is accessible through a network,

wherein a first document includes a first display reference, wherein the first display reference corresponds to a first availability condition of transaction function devices in an automated transaction machine,

wherein a second document includes a second display reference, wherein the second display reference corresponds to a second availability condition of transaction function devices in an automated transaction machine,

accessing with the browser either the first or the second document,

wherein the first document is accessed when the provided automated transaction machine corresponds to the first availability condition, and

wherein the second document is accessed when the provided automated transaction machine corresponds to the second availability condition,

providing a display to an output device, wherein the display corresponds to the document accessed.

20. (newly added) The apparatus according to claim 19 wherein the machine includes a currency dispenser transaction function device in the machine.
